FOR IMMEDIATE RELEASE

Banco Guayana Deploys Trusted Security Solutions' A98 Remote Key Loading System to Lead Country in ATM Key Management Security

Puerto Ordaz, Venezuela – November 10, 2008 – Trusted Security Solutions, Inc., a leading provider of secure ATM key management solutions, today announced that Banco Guayana, one of the most progressive banks in the Venezuela, has successfully installed the A98 ATM Remote Key System to ensure ATM key management, boost ATM security, and guarantee compliance with important network standards such as VISA and Mastercard. Banco Guayana is one of a growing number of banks across the globe implementing remote key loading. Remote key loading deploys public cryptography and is universally recognized as the most secure method to establish the initial encrypting key in ATMs.

As a result of more than 50 years of consistent growth, Banco Guayana has installed more than 100 ATMs throughout Venezuela. Banco Guayana's operation's management team desired a centralized system of managing the process of deploying and maintaining unique initial cryptographic keys in all Banco Guayana ATMs, ensuring strict security standards are met. The A98 ATM Remote Key System is not only centralized and does not rely on manual methods to establish keys in ATMs, but it is "state of the art" and meets and exceeds the compliance standards set by the new executive directives from the "Superintendencia de Bancos de Venezuela" (SUDEBAN)

Trusted Security Solutions' A98 system now allows Banco Guayana to change the initial encrypting key in any ATM easily any time they wish. No visit to the ATM is required. The A98 stands as one of Banco Guayana's most valued ATM network tools, allowing for complete compliance, while also eliminating key management concerns of fraudulent data capture through collusion or mishandling of paper key components.

"With the SUDEBANK's directive to increase security standards in placing encrypting keys in ATMs, we wanted to implement not only a compliant solution, but one that was that was the most advanced and secure available today." said Bernardo Kabche, Presidente Ejecutivo of Banco Guayana's. "The A98 Remote Key System met these requirements and we are pleased that it is now installed and operational."

"Strict security standards serve as a continuous driver for A98's growth, while we also couple dramatic operational efficiencies that are immediately felt by a financial institution's ATM

administrators,” said Dennis “Abe” Abraham, President of Trusted Security Solutions. “Trusted Security Solutions is honored to play an important role in Banco Guayana’s growth in new branch and ATM deployment.

About A98 ATM Initial Key Establishment System

Trusted Security Solutions’ flagship product, the A98 ATM Initial Key Establishment System, stands as one of the most respected secure ATM key management systems worldwide. Used as the initial key source for more than 200,000 ATMs, the A98 is a trusted tool for addressing ATM security requirements, including compliance with ANS X9.24 and other network standards. A98 offers one system that provides efficient, compliant and comprehensive key management for all ATMs. Through patented technology, A98 allows all sizes of financial institutions and processors to eliminate non-compliant global keys replacing them with unique double length triple DES keys using Comvelopes[®]. A98 also allows organizations to do away with the traditional use of paper components and manual logs altogether – all through automated remote key generation, distribution and loading. About Trusted Security Solutions

Trusted Security Solutions, Inc. (TSS) is a leading provider of secure financial transaction processing solutions for ATMs. For more than 10 years, TSS technology has led the industry in innovatively addressing ever-growing ATM security and compliance demands through its secure ATM key management solutions. Serving institutions that manage cryptographic keys for ATMs, Trusted Security Solutions’ A98 ATM Initial Key Establishment System ensures compliance with ANSI and ISO standards. A98’s patented technology has established itself as the de facto industry standard for symmetric ATM key generation and distribution. TSS also provides a module for remote key loading, as well as outsourcing, consulting and training services to selected clients. Privately held, TSS is headquartered in Charlotte, North Carolina.
