FOR IMMEDIATE RELEASE

TSS's A98 ATM Key Management System Now Supports Remote Key Loading for Hyosung's EPP8000

Charlotte, NC – July 31, 2015 – Working together with Nautilus Hyosung's US operations team, Trusted Security Solutions, Inc. has successfully completed remote key load testing and certification with Hyosung's latest PCI 3.0 EPP using the A98 ATM Key Management System.

Hyosung customers receiving these new EPPs from Hyosung wishing to use remote key loading need to know that changes at the host are required. The EPP8000 uses a different Certificate Authority than the previous EPPs. The A98 development team has implemented these changes so that both the older and new EPPs are accommodated.

"Hyosung US and internationally has become one of the most popular ATMs," says David Pharr, Director of Business Development at TSS. "It is important that we help maintain a smooth transition strategy for our A98 customers when deploying the EPP8000 into their fleet of ATMs."

Nautilus Hyosung is a global leader in providing ATMs to financial institutions and independent service organizations.

Trusted Security Solutions, Inc., a leading provider of secure ATM key management solutions, is headquartered in Charlotte, North Carolina, USA. For more information on the A98 ATM Key Management Solution, visit www.trustedsecurity.com.
